

1. Purpose and scope

This fictional internal process describes how an adviser handles a motor claim from first notice to closure. Every new claim must be logged in the claims register on the day it is received. The adviser is the client's single point of contact throughout the claim.

2. Registering the claim with the insurer

After a client submits a claim, the adviser sends the claim to the insurer and records the insurer's claim number and the name of the claims handler on the claim record. The claim is only marked as registered once the insurer's claim number is recorded. The adviser confirms the registration to the client.

3. Arranging a hire car

When the insurer authorises repairs, the adviser arranges a hire car with the approved hire supplier. The adviser arranges delivery of the hire car to the repairer on the day the client's vehicle goes in, and confirms the arrangement to the client by email. When repairs are complete the adviser arranges collection and return of the hire car and records the return date on the claim.

4. Weekly repair updates

While the vehicle is in repair, the adviser asks the repairer for a progress update every week. The update is posted to the claim timeline so that the client can see it. If the repairer misses two weekly updates in a row, the adviser escalates to the claims handler at the insurer.

5. Closing the claim

When the repairs are finished and the hire car is returned, the adviser marks the claim as completed and asks the client to write a short review. The claim is closed after the client's review.
