AfriHack 2026

Document	Product Requirements Document
Client	Royal Square Financial (Pty) Ltd — FSP 29370
Director	Qimso Ntuli
Version	1.0 — Hackathon Edition
Date	19 September 2026

Confidential — For AfriHack 2026 Use

1. Problem Statement

Royal Square Financial is an independent full-service brokerage and Financial Services Provider focused on wealth creation and preservation. They offer life, health, funeral, personal and commercial insurance as well as goal-based investments from major South African providers (Sanlam, Old Mutual, Liberty, Momentum, Discovery, Allan Gray, Santam and others).

The core problem is paperwork and compliance load. Every adviser needs formal qualifications. Every client interaction generates admin: identity checks, record-keeping, data protection, policy documents, renewals and claims processes. The volume grows every year. Advisers now spend more time on forms and searching documents than advising clients. Software is the only scalable way out.

2. Solution Overview

A dual-sided digital platform that connects clients and advisers, reduces manual work, gives real-time visibility, and adds intelligent assistance for documents and email.

The platform has two interfaces sharing the same backend:

- **Client App** — Simple mobile-friendly interface for policyholders
- **Advisor Portal** — Powerful dashboard for advisers to manage clients, claims, goals, reminders, documents and email

3. Product Goals

- Reduce time spent on paperwork and admin
- Give both client and adviser a single source of truth for financial position, claims and goals
- Make claims handling (especially motor claims) faster and clearer from scene to settlement
- Automate reminders so nothing important is missed
- Help advisers quickly find answers inside policy documents, regulations and internal processes
- Surface and assist with important email communication

4. Core Features (From Original Requirements)

4.1 Client Dashboard

Real-time view of each client's financial position and net worth in one place. Shows policies, open claims, goal progress and upcoming reminders.

4.2 Automated Reminders

System-generated reminders for tasks, documents, renewals and reviews. Examples:

- Insurance valuation certificate every 2 years → adviser + client
- Driving licence expiry → client
- Annual financial review meeting → adviser
- Retirement fee renewal → adviser
- Birthdays and anniversaries → adviser (automated)

The list of reminder types is expected to grow.

4.3 Goal Tracking

Advisers load individual or shared goals for a client. The dashboard shows visual progress (progress bars and percentages).

4.4 Motor Claims Journey (Detailed Flow)

A. Report an Accident / Loss

Client taps "Report an Accident or Loss". The app immediately returns a checklist of what to gather at the scene:

- Photos of road surface and direction of travel
- Address or nearest cross streets

- Photos of all vehicles and people involved
- Licence plates and registration discs
- ID documents of everyone involved
- Witness names, contact details and optional voice note
- Insurance details of other parties
- Reminder to report to the police within 48 hours

B. Register a Motor Claim

Client selects insurer and the app collects: date/time/description, police case number, witness details, driver information, personal vs business use, third-party details. Uploads photos, driver's licence and accident sketch.

C. Post-submission Tracking (managed mainly by adviser, visible to client):

1. Insurer returns claim number and claims handler
2. Client takes vehicle for assessment
3. Assessment goes to insurer and to Royal Square
4. Repair quotes go to insurer
5. Insurer authorises repairs
6. Client picks date for vehicle to go in
7. Adviser arranges car hire and delivery to repairer
8. Weekly repair updates pushed to adviser
9. Adviser arranges collection and return of hire car
10. Client writes short review and closes the transaction

4.5 Other Client Requests

Change of address • Change of bank details • Request a policy document • Request a border letter • Request an IRP5 • Request a consultation • Client information collection (balance sheet / income statement)

4.6 Principle

The more that can pass straight through to the product provider automatically (API, direct integration or file transfer), the more useful the system becomes.

5. Additional Features (Team Additions)

5.1 RAG Document Assistant (Advisor Side)

A Retrieval-Augmented Generation chatbot available only to advisers. It answers questions using only the firm's approved document set (policy wordings, internal process documents, company policies, relevant regulations and laws). Every answer includes clear citations: document name and page number so the adviser can go straight to the source.

Example use cases:

- "What is the notification period for a motor claim under a typical Santam policy?"
- "What does our internal process say about arranging a hire car?"
- "Summarise the key exclusions in this product wording."

This directly reduces time spent scrolling through long PDFs and lowers compliance risk.

5.2 Google Workspace / Email Integration (Advisor Side)

Integration with the adviser's Google Workspace (primarily Gmail) so the platform can assist with email-related work:

- Surface and flag important client or insurer emails
- Retrieve context from email threads related to a client or claim
- Help draft replies
- Link relevant emails to a client or claim record inside the platform

Note: Full production-grade Gmail integration requires OAuth consent, careful permission handling and reliability work. For the AfriHack demonstration a controlled/simulated version or clear roadmap presentation is acceptable. Full live integration is intended as a near-term production enhancement.

6. User Roles & Permissions

Role	Can Do
Client	View own dashboard, goals, claims, reminders; start accident report & register claim; submit requests; upload documents
Advisor	View all assigned clients; manage claims pipeline; set & update goals; manage reminders; action client requests; use RAG assistant; interact with email integration
Admin (future)	User management, document library management for RAG, system configuration

7. Feature Summary Matrix

Feature	Client	Advisor
Personal / Client Dashboard	Yes	Yes
Net worth / financial position view	Yes	Yes
Goal tracking (view)	Yes	Yes
Goal creation & updates	No	Yes
Automated reminders (receive)	Yes	Yes
Reminder management	No	Yes
Report Accident + Checklist	Yes	View
Register Motor Claim + Uploads	Yes	View full record
Claims status tracking	Yes	Yes + update
Arrange hire car / repair logistics	Informed	Action
Other requests (docs, address, IRP5...)	Submit	Action
RAG Document Assistant	No	Yes
Google Workspace / Email assist	No	Yes

8. Success Metrics (Post-Hackathon)

- Reduction in time spent searching for policy or process information
- Faster claim registration and fewer missing documents at first submission
- Higher percentage of reminders actioned on time
- Adviser time freed for actual client conversations
- Positive feedback from pilot advisers on the RAG assistant and overall usability
